

Programs Based on Vibraimage Technology with a Payment System for Viewing the Result

Sergey S. Didenko

Elsys Corp, St. Petersburg, Russia, ya.serdidenko@ya.ru

Abstract: *The article describes a new system for purchasing software products based on vibraimage technology, which implies free delivery of programs and subsequent payment for viewing the results of each measurement separately.*

Keywords: *Vibraimage technology, Android, free software, payment for the result, VibraMed, VibraMI, VibraMix.*

In some cases, may not be profitable for users or it is impossible, due to a limited budget, to purchase full versions of software based on vibraimage technology (Minkin, 2007; 2020; Minkin & Nikolaenko, 2017). That is why a payment system has been developed by Elsys Corp that combines easy payment and delivery of software, ease of use and benefits compared to buying full versions.

New Payment Methods for Vibraimage Programs

For users of a number of software products based on vibraimage technology, namely VibraMed for Android OS (VibraMO, 2020), VibraMI for Android (VibraMIA, 2020) and VibraMix (VibraMix, 2020) for Android, a pay-per-view system is available. This approach has several advantages for the user:

- The ability to quickly install the program and get the first results without significant financial costs.
 - The ability to check the software, its applicability in each specific case, without buying the full version.
 - Regular software updates.
 - No need to pay to use programs while on vacation or work breaks.
 - Pay only for the result.
 - A transparent system of payment, account replenishment and, as a result, the convenience of budget forecasting.
 - Personal account with the results of all measurements based on different programs.
- Thus, the process of programs purchasing is follows:

1. The user downloads the installation file for VibraMed, VibraMI or VibraMix to his smartphone, after which the corresponding program is installed.

2. After launching the program, the user is given the opportunity to enter his email address and password (Fig. 1).

The image shows a registration form titled "REGISTER". It contains three input fields: "Login" with the text "EUGENIA", "Email" with the text "XXXXXXXXXXXX@mail.ru", and "Password" with a masked password "*****". Below the fields is a dark button labeled "Register".

Fig. 1. Registration

This will create a personal account (Fig. 2) on the vibrabrain.com website, where you can monitor the account status, balance expenses, and view the measurement results, both already paid and those that have been received, but not paid for and so far hidden from the user.

The image shows a "SUMMARY OF RESULTS" page for user "EUGENIA". It states "EUGENIA, your balance is 80 points." Below this, there are two report entries: "M Report for May 25, 2018, 4:32 pm" with a "See report" link, and "M Report for May 31, 2018, 2:19 pm" with a "Get report" button.

Fig. 2. Personal account

3. After entering the email address and password, the main program window will be launched, in which the user takes the necessary measurements in accordance with the operating manual for the corresponding program. After the results are received, they are automatically stored on the server in an encrypted state.

4. To view the results, you need to fund your personal account. It's very simple — you need to follow the link in your account or select the payment package on psymaker.com and follow the instructions.

5. After the personal account is replenished, you can select the result that you want to view and confirm the deduction of points for viewing. Now the result of this measurement can be viewed in your personal account (Fig. 3) at any convenient time.

Fig. 3. Displaying the measurement result in your personal account

That is, from downloading the application to getting the result — only 5 simple steps (Fig. 4).

In addition, it is important that points in your personal account can be spent to view the results of any of the three programs. In this case, of course, viewing the VibraMI

result will cost more points than viewing the VibraMed result, but this approach allows the user to use several programs simultaneously.

Conclusion

Thus, payment for viewing the result is a very convenient, profitable and fast way to purchase and use vibraimage programs. With the introduction of payment for testing, Elsys is offering end users the latest in safety, psychology and education professional development at an affordable cost.
